

Cukurova University – Computer Engineering

Course: Network Programming | Final Exam

1. What is a **Loopback IP**? Explain its purpose and how the OS handles packets sent to it.
2. Define **Protocol**. Is it possible to implement a custom protocol at the **Network Layer**? Explain your answer.
3. What mechanisms or techniques are used in a TCP server to handle **concurrent connections**?
4. In a protocol using **ACKs**, what specific action must the **Sender** take if an expected ACK is not received?
5. In the **Multichat Project**, why was it necessary to perform nickname validation on the **Server-side**?
